# PUBLIC PRIVATE PARTNERS SYSTEM

Dynamic Workflow Solutions' NEW 3PS
⌒ PUBLIC ⌒ PRIVATE ⌒ PARTNERS

The **Dynamic Workflow Solutions Inc.** product called the **Public Private Partners System (or 3PS),** is to solidify, document, share, and support the relationship between businesses and law enforcement in a collaborative arrangement to better support community safety. Government agencies work closely with private-sector entities to address various security and public safety challenges. This partnership aims to leverage the strengths and resources of both sectors to enhance overall safety, security, and crime prevention.

Key aspects of a **Public-Private Partnership** in the context of businesses and law enforcement may include:

1. **Information Sharing:** Both parties share relevant information and intelligence to identify and address potential security threats. This collaboration helps in early detection and prevention of criminal activities.

2. **Technology Integration:** Businesses often have access to advanced technologies and expertise that can be beneficial for law enforcement. Integrating private-sector technology with law enforcement efforts can improve surveillance, analysis, and response capabilities.

3. **Training and Education:** Collaboration in training programs provides law enforcement and private-sector personnel to develop skills and knowledge necessary for effective security measures. This can include training on cybersecurity, emergency response, and other relevant areas.

4. **Joint Operations:** Law enforcement agencies and private entities may engage in joint operations to address specific security concerns and coordinate efforts during events, crises, or investigations.

5. **Infrastructure Security:** Protection of critical infrastructure, such as transportation hubs, communication networks, and utilities, is a common focus of **PPPS**. Both sectors contribute to securing these vital assets.

6. **Policy Development:** Collaborative efforts to develop policies and guidelines that enhance security measures with input from both the public and private sectors to create effective and balanced approaches.

The success of a **Public Private Partnership** relies on effective communication, mutual trust, and a shared commitment to enhancing public safety. These collaborations can be particularly valuable in addressing evolving threats, such as cybercrime, terrorism, and other complex security challenges.

The agencies simply send out a registration link for organizations that want to sign up. The data collected from these registered users will be put into categories for easy searchability and is completely configurable, but not limited to:

Organization Type	Organization Name	Address/es
Key Phone Numbers	Contact Name	Contact Cell
Owner Email	Manager Name	Manager Cell
Manager Email	Camera System Manufacturer	Camera Count
Camera System URL	Hours of Operation

Organization camera systems, where possible, can have devices available for the local law enforcement. First responders will not only have access to the live camera feeds but also to the floor plans, digital twins and any other digital asset stored in the system to help provide a safe response to the situation.

Hybrid is not just a database or rolodex of businesses in the community. Once the incident has occurred, **Hybrid** can then be used to create a case and store all the captured videos, photos and any other digital evidence file acquired from the location. **Hybrid** can also send an email with a link for the owner/manager to upload any additional files collected before or after the incident; ensuring all files are in a single evidence management system.

Key Features

- Available to any K-12 school, university or business in your community

- Network Login and Passwords are registered with local law enforcement.

- Schools can have immediate law enforcement visibility to threats.

- Simple Google Map Links.

- Proactive, informed response is critical when children are at risk.

- More information law enforcement can get the better chance they have of successfully dealing with a threat.

- 911 / Dispatch can instantly access the network and get visibility into the school security cameras, locate the threat and guide responders to the appropriate location to engage.

- Digital Floor Plans and Digital Twins

- Geospatial Images of Facilities

- Emergency Evacuation Plans

- School Critical Contacts and Photos

- Threat History Video and Audio

- Photos of Known Offenders

- Chances of a Successful Outcome are Greatly Improved

- Secure Content for Distribution

- Video from In-Car, Cell Phones, Body Worn

- Audio, Documents, Pictures, Reports, Web Content

- Store Files in the Digital Evidence Vault
