

DATA-CENTRAL with BRIEFCAM by

DYNAMIC WORKFLOW SOLUTIONS

ANALYZE WITH EASE TRANSFORM INSIGHT

Accelerate, enhance and analyze your investigations effortlessly with the combined power of **Dynamic Workflow Solutions (DWS)** and **BriefCam**. Quickly take problematic proprietary videos from pole cameras, MTA busses, ATMs, bodegas, and drag & drop them into **DWS' Data-Central (DC)**. In **DC**, the videos are converted at a binary level, from proprietary formats, into Standard MP4 files, (all in a matter of seconds), deemed "Work Product," and are now a useable video file for **BriefCam**. Review, tag with metadata and manually or automatically send the Work Product to **BriefCam** for enrichment. **BriefCam**, analyzes the hours/days long video files and consolidates them into a single potent 10-minute **VIDEO SYNOPSIS®** using 27 classes and attributes, in addition to face recognition, appearance similarity, color, size, speed, path, direction, and dwell time, providing an ever-increasing and powerful set of distinct search combinations.

Once **BriefCam** has completed its analysis, the new **VIDEO SYNOPSIS®** is then sent with the Work Product back through **DC** with full chain of custody and authentication, as well as the original first instance evidence, where the Digital Media Evidence (DME) package can be viewed and sent to any 3rd party DEMS solution/storage or other agency. This powerful partnership empowers users to instantly search and filter objects and events of interest by men, women, children, vehicles, lighting changes and more, with speed and precision.
